

Uo q . n r . du . r audira

FRONTEND
DEVELOPER
WEB AND
SOME APP

Hello
I'm Raka,
audira is the
middle name, born
since nineteen ninety seven
Padang, West Sumatera, Indonesia

PROGRAMMING SKILLS

React.js

I learn and use this since 2018 until now and keep improving sincerely along with updates

Next.js

Along with React.js, primarily i use this for SSG and SSR

SASS/SCSS

I use this natively rather than CSS/Layout framework

React Native

For app stuff, since i don't have experience with Java or Objective-C

Express.js

in the Backend side, i learn and use side by side with React.js in 2018

MYSQL

For database, i only have experience with MySQL since i way more focus on Frontend

Javascript / Typescript

This two is my primary language. I use Javascript a lot since 2012, my middle school time to learn basic web, and now along with Typescript since 2020 for those frameworks above

Redux

I use Redux along with Redux Toolkit and Redux Persist to help me manage global state of application in React.js, React Native, and Next.js framework.

Three.js / react-three-fiber

I learn this since 2021 for WebGL or 3D stuff on web. It is fun rather than using WebGL API directly. Not an extensive user due to i've never get a job as WebGL developer.

Cannon.js

Along with Three.js to simulation physics, but i prefer to use Rapier.rs

Rapier.rs (Web Assembly)

Same for physics simulation along with Three.js, i use this to rely on Rust's performance

Kotlin Android

I use Kotlin language for development Android app natively. Although, i can use React Native, but i still have to learn it because of my side project dependency and feature that i can't cover it up with React Native only. If possible, i would develop an Android app natively nowadays.
